## MOLECULAR GASTRONOMY

When people hear the word molecular gastronomy or molecular cuisine for the first time they often mistakenly view it as unhealthy, synthetic, chemical, dehumanizing and unnatural. This is not surprising given that molecular gastronomy often relies on fuming flask of liquid nitrogen, led blinking water baths, syringes table top distilleries, PH meter and shelves of food chemicals with name like carrageenan, maltodextrin and xanthan.

The truth is that the “chemicals” used in molecular gastronomy are all biological origin, even though they have been purified and some of them processed, the raw material origin is usually marine plants, animals or microbes. The science lab equipment used just helps modern gastronomy cooks to do simple things like maintaining the temperature of cooking water constant, cooling food at extremely low temperatures fast or extract flavour from food.

Cocktails in ice spheres. Caviar made of olive oil. Disappearing transparent raviolis sounds cool? Well these are all examples of Molecular Gastronomy. Molecular Gastronomy blends physics and chemistry to transform the taste and texture of food. The Result? New and innovating dining experiences.

The term Molecular Gastronomy is commonly used to describe a style of cuisine in which chefs explore culinary possibilities by borrowing tools from the science lab and ingredients from the food industry. Formally, the term molecular gastronomy refers to the scientific discipline that studies the physical and chemical processes that occur while cooking. Molecular gastronomy seeks to investigate and explain the chemical reason behind the transformation of ingredients, as well as the social, artistic and technical component of culinary chefs.

Gastronomy was coined in 1998 by Hungarian physicist Nicholas Kurti and French physical chemist Hervé This in 1992 became the title for a set of workshops held in Erice, Italy that brought together scientific and professional cooks for discussion about the science behind. Many modern chefs do not accept the molecular gastronomy to describe their style of cooking and prefer other terms like “Modern Cuisine”, “Modernist Cuisine” experimental cuisine or “Avant-garde cuisine”. Heston Blumenthal says “molecular gastronomy make cuisine sounds elitist and inaccessible as though you need a degree in Rocket science to enjoy it”.

In our college we were also shown the demo on molecular gastronomy by world master Chef Harith Pathak and Slyvester Rozario. They showed us practical application of science on food. They showed us how spaghetti was being prepared by beetroot puree. Even caviar was made by beetroot puree. A dessert was made by them using mango puree which looked exactly like a fried egg. Chefs inspired us a lot and motivated us.

Cheque of total Rs 56000/

Email from Capt Patankar :

Dear Capt Ashutosh,

Good evening!

I take this opportunity to thank you on behalf of all MMMH members for grand GTG arranged at TS Rahaman.

Weeks of meticulous planning to the last detail made this GTG memorable. All the culinary delights for dinner , breakfast and lunch were sumptuous.

Kudos to your catering team and the cadets who made all the efforts to make our stay comfortable.

Cadets / Ratings described every detail and history of Rahaman during the campus round.

Once again thank you very much.

Excluding the cost of beverages, we hereby donate you an amount of about 35600/-

Our best wishes to all at TS Rahaman.

Thank you,

Warm regards,

Capt Swanand Patankar

## A TRIP TO INDIRA DOCKS

On 20th September 2017, the GP-II class of 40 students visited Indira docks. It began with a muster in front of the G C Library and then we boarded the bus for our first ever outdoor trip during our training. We collected the packed lunch and departed from the campus at 0850 hrs. We were accompanied by Captain R. Bhatia, Mr. Rajan Lal and Mr. Pratap Jadhav. Some of us felt we were proceeding on shore leave as we left the campus. The rain accompanied us along the way to Indira Docks

Upon reaching the docks we felt very excited as it was our first outdoor visit. We underwent a very strict security check at the entrance gate. Mr. Jitendra Jagdale, the dry dock inspector accompanied us around the port. We first spotted a fleet of new cars being driven onboard a RO-RO vessel, just after we witnessed the berthing of it; a rare experience but a truly exciting one. Then we proceeded towards two General Cargo vessels, San Nicholas and S. Bravery Man Vovia. Capt. R Bhatia showed us the draft marks on the ship. Learning practically is certainly more interesting than trying to imagine theoretical knowledge.

Our guide took us to the dry docks. On the way we saw a Korean flag ship named Woohgun Green. We identified the ship from the Ensign flag on the aft of the vessel. We also saw many off-shore vessels being repaired at the docks. We noticed the depth of the dry dock, 38 mtrs, and length, 304 mtrs, marked in Roman numerals. The dry dock can accommodate 3 to 4 vessels simultaneously. We then proceeded towards the Lock Gates, the main entry and exit for vessels proceeding to and from the docks.

Mumbai Port has three enclosed wet docks. Prince's Dock, Victoria Dock and Indira Dock were commissioned in 1880, 1891 and, 1914 respectively. Indira dock was then named Alexandra dock. We proceeded to the Cruise terminal where passenger vessels berth. This terminal will shortly undergo a new look with better facilities for the tourists. In the Naval section, we saw a few Indian Navy ships, mostly painted white, - Virat R22, an Aircraft Carrier, INS Chennai, and three submarines. This was indeed an amazing experience.

It was time to head back to the institute. We proceeded towards the check-out area and underwent another security check before departing from the docks at 1330 hrs. On the way we stopped at Nerul and enjoyed our packed lunch. We arrived on the campus at 1530 hrs with loads of firsthand knowledge and a once-in-a-life time experience.

I feel grateful to the Management and Staff of T S Rahaman for their effort in making our training here, an enjoyable experience.
